

Q Why it is important to stay updated as a junior developer?

→ The IT ~~market~~ sector is volatile & ever changing. Technologies are changed updated or included every now and then.

To stay relevant in this field, we need to keep our self updated with upcoming trends & tech-stack.

Recent changes & emergence of Generative AI has shown the significance of staying updated & importance of learning new skills.

If we ~~stay~~ find our self ignorant to changes then there is a real chance of ~~being~~ we being irrelevant to the sector.

Q What things you want to learn to stay updated?

→ In this changing environment we need some key skills to counter in-efficiency i.e. to learn prompt engineering. To learn presentation skills.

- Using AI to delicate your work.
- Learning Kubernetes, Docker &
- Web3, applica
- How to make applications for hardware like Vision Pro.

Q What challenges you might face while staying updated?

→

- Finding resources or abundance of resources leading to confusion.
- Finding a mentor or teacher to guide you on the right path.
- To stay motivated.
- Maintaining consistency while doing tasks
- Low self esteem, leading to being afraid to do the task.
- Being comfortable with failure.
